

## Electronic Circulators for HVAC Systems **ECP-F Series** **(Commercial-Flanged)**

## Frequency Controlled, Electronic Circulation Pump

ECP-F series are intelligent efficiency circulation pump. Equipped with permanent magnet motor and intelligent pressure control system. It adopts canned structure, the motor stator is completely canned, the rotating parts are immersed in the conveying liquid, the liquid plays the role of cooling the motor and lubricating the bearings. The product has the characteristics suchas no leakage, super quiet, energy saving , high efficiency ect.

Commercial  
Air Conditioning

Commercial  
Heating

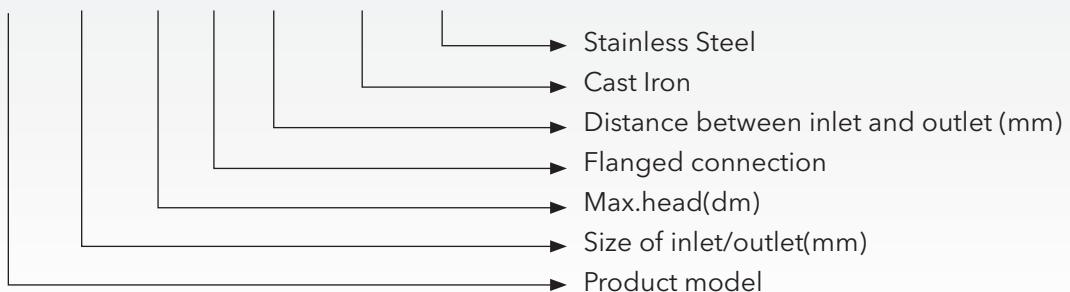

Domestic  
Heating

### Technical Specifications

Maximum Power	: Up to 1. 523 W
Maximum Flow	: 68 m <sup>3</sup> /h
Maximum Head	: 18 m
System Pressure	: 10 Bar
Liquid Temperature	: -10 °C ~ +110 °C

### Naming Detail

**ECP 50 - 120 F 280 Blank N**

## Precise Control, Multiple Protection

- High accuracy of the algorithm
- THD (Total Harmonics Distortion) 8%
- Power factor > 98%,
- Power detection accuracy ± 3%

Memory with  
power restart

Fault  
detection

Anti-seize  
design

Overheat  
protection

Overcurrent  
protection

### Pump Configuration

Motor	: High efficiency permanent magnet motor
Pump shaft	: Tungsten Carbide Alloy Stainless Steel
Bearing	: Ceramic
Impeller	: High temperature resistant composite material

### Pump Features

- Class A energy efficiency, EEI≤0.23;
- Permanent magnet motor intelligent frequency control;
- Proportional pressure mode;
- Constant pressure mode;
- Constant speed mode;
- Low noise;
- No leakage.

### Application Limits

- Installed in the heating circulation system;
- Operating Conditions:
- Ambient temperature: 0~40°C;
- Ambient humidity: <95%;
- Liquid temperature: -10 °C ~ +110 °C;
- The ambient temperature is lower than the liquid temperature to prevent condensate liquid inside the motor;
- Liquid material: non-corrosive, non-explosive liquid, no solid particles, fiber and mineral oil;
- Use requirements: Running can not no more than 10s without water.

## Intelligent Control Saves Time And Energy

Constant pressure mode      Proportional pressure mode

Constant speed mode

AUTOADAPT mode

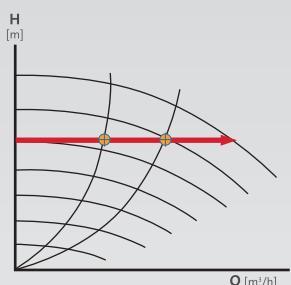

FLOWADAPT control mode

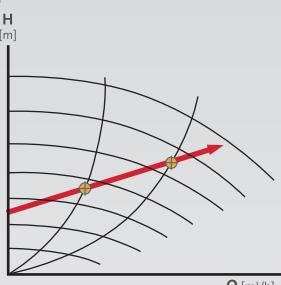

Temperature control mode

### Constant Pressure Mode

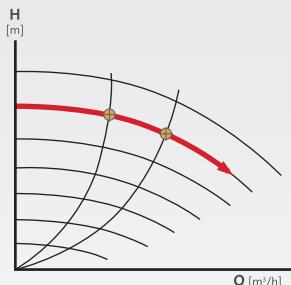

Constant pressure control is used to adjust pump performance based on actual system heat demand, but the pump performance curve will depend on the desired pump curve.

### Proportional Pressure Mode

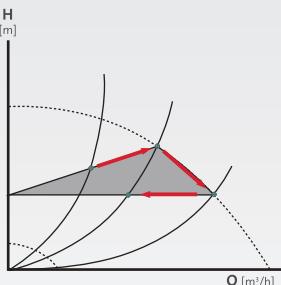

Proportional pressure control is used to adjust the pump performance according to the actual system heat demand, but the pump performance depends on the desired pump curve PP1, PP2 or PP3. Three gears are adjustable, namely small, medium and large.

### Constant Speed Mode

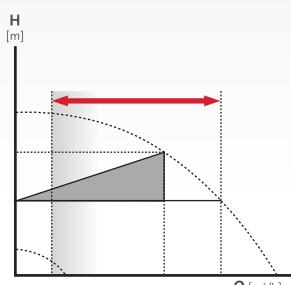

At constant speed, the pump runs at a constant speed, independent of the actual flow demand of the system, and the performance of the pump is determined according to the required power curve.

### AUTOADAPT Mode

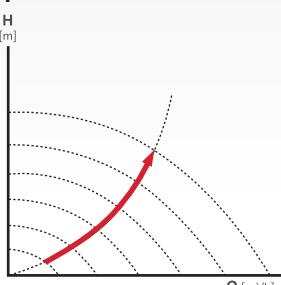

During operation, the system will regulate the performance of the pump according to the flow rate required by the user. The water pump is under proportional-pressure control. The system adaptively adjusts the pump performance within a certain area so that the pump works at a high efficiency.

### FLOWADAPT Control Mode

When the FLOWADAPT control mode is selected, the pump will run AUTOADAPT and ensure that the flow rate does not exceed the limited flow rate value. This control mode is suitable for systems that need to limit the maximum flow. Pumps in boiler applications where a steady flow through the boiler is required. No extra energy is used for pumping too much liquid into the system.

### Temperature Control Mode

This control mode is suitable for systems with fixed system characteristic curves, and the pump can be controlled according to the temperature sensor feedback of the system to make it work under the working conditions required by the user.

## Pump Material Detail

This product has three advantages: PES engineering plastic impeller, tungsten carbide treated stainless steel rotor shaft, and high power permanent magnet synchronous motor.

PES Engineering Plastic Impellers

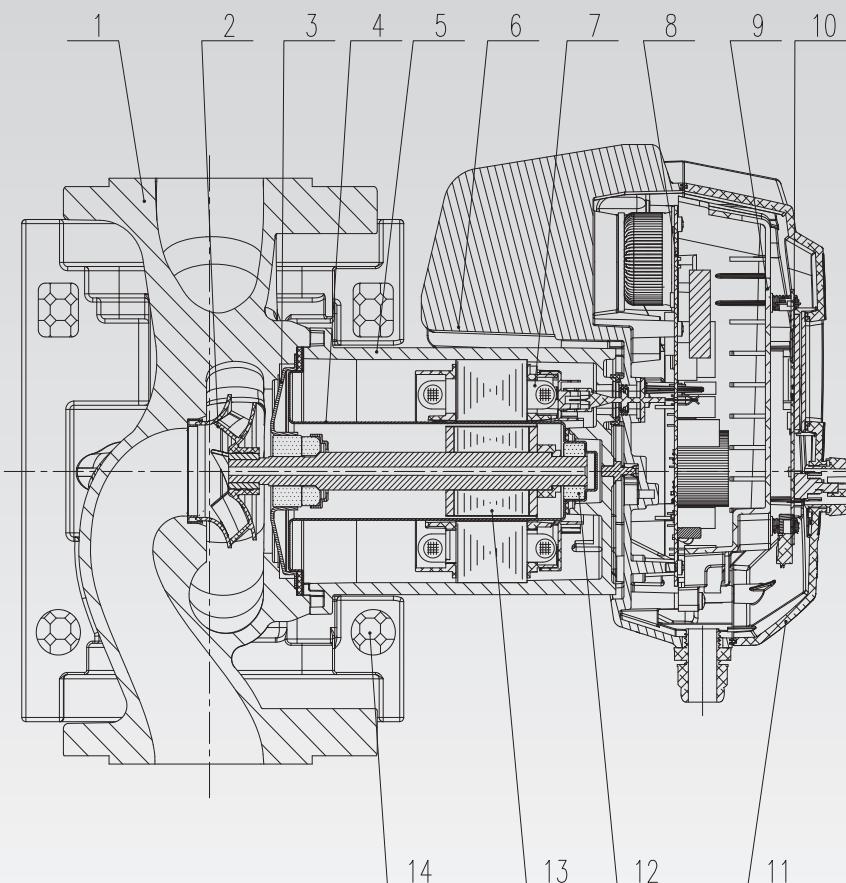

Permanent magnet motor

Stainless steel rotor shaft

## Material Specifications

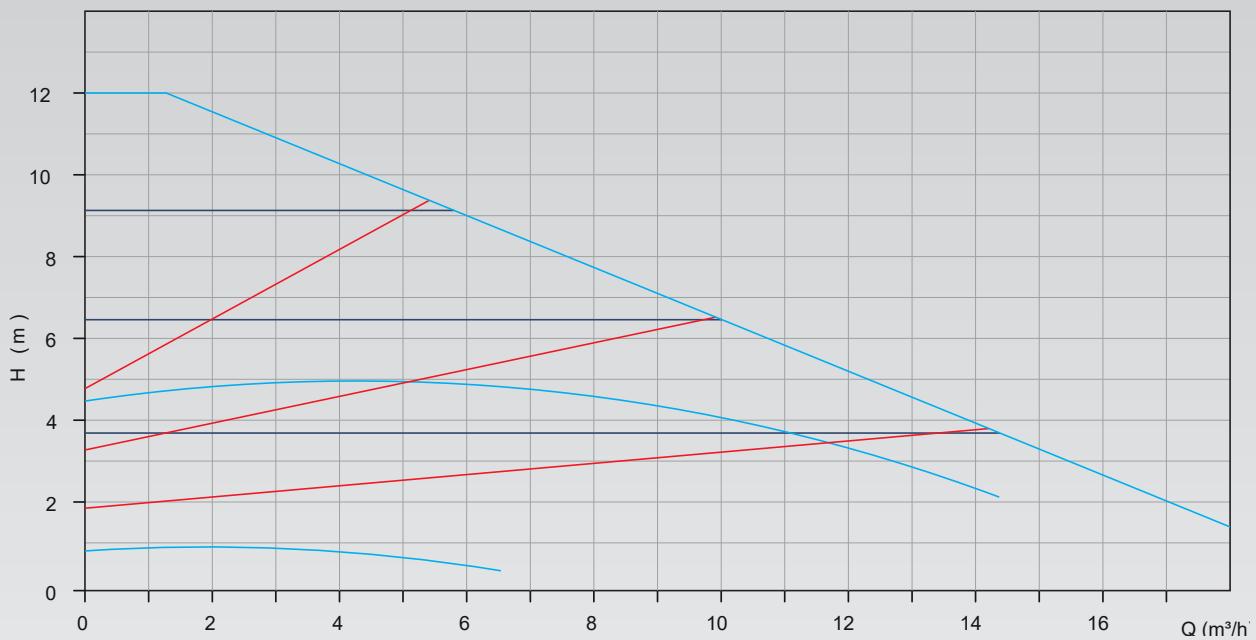

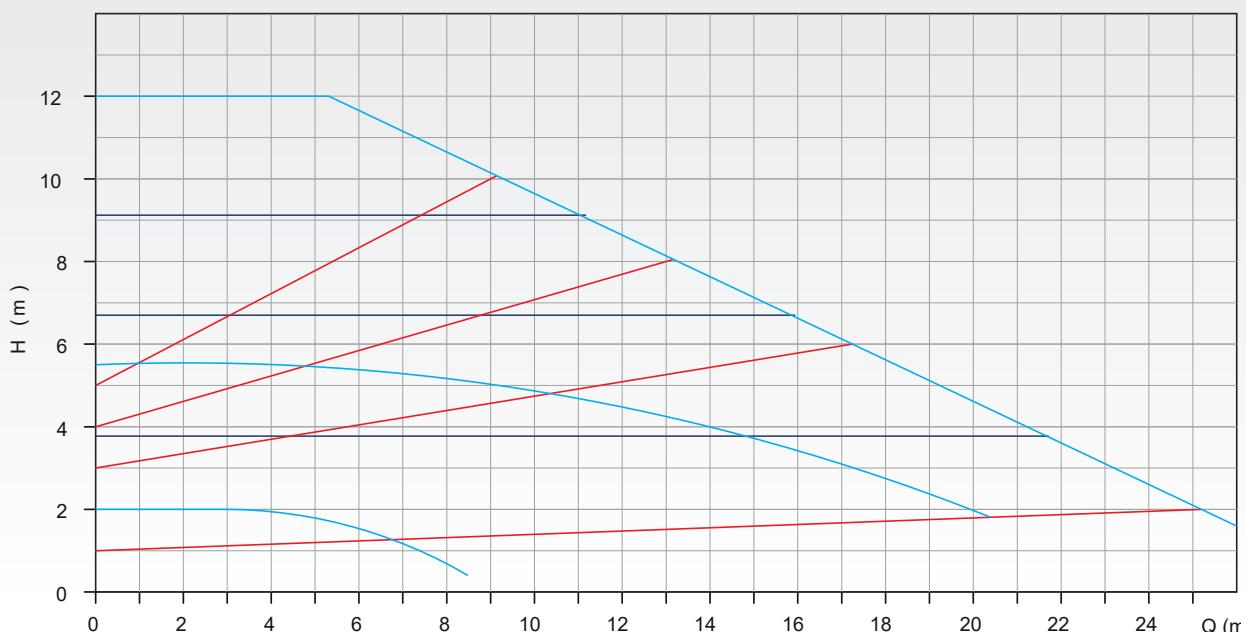

POS.	COMPONENT	CONSTRUCTION CHARACTERISTICS
1	Pump Head	Cast iron surface electrophoresis treatment, exterior painting treatment
2	Impeller	Hydraulic model, equipped with PES engineering plastic impeller
3	Stainless Steel Cover	Stainless steel material
4	Shielding Sleeve	Stainless steel material, the inner wall is mirror-finished
5	Barrel	Aluminum alloy barrel, the surface is treated with black electrophoresis.
6	Casing	Plastic spray outside
7	Stator	Full copper wire
8	Driver	Electronic device
9	Control Board	Electronic device
10	Isolation Shield	Black plastic
11	Cover	Using high-strength plastic, surface skin texture treatment, secondary vulcanization treatment of sealant, beautiful and fashionable appearance
12	Bearing	Brown ceramic
13	Rotor	Stainless steel shaft + tungsten carbide spray treatment
14	Foam	Black EPP material, with the characteristics of heat preservation and safety protection.

## Performance Chart

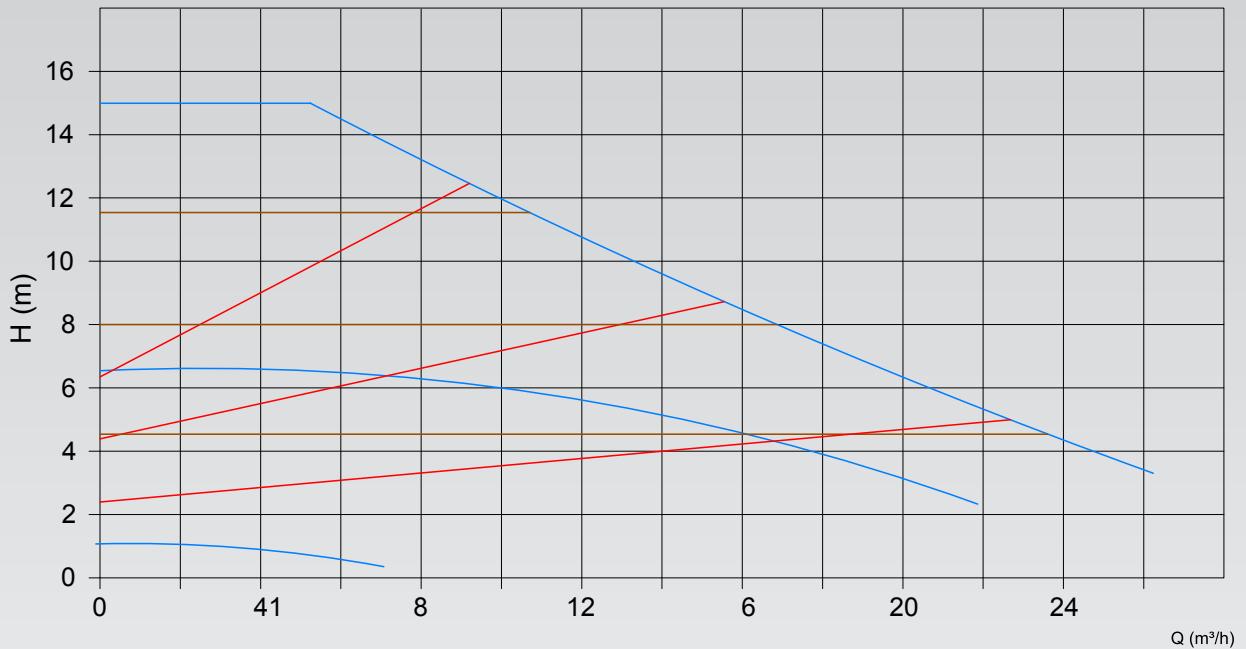

Model	Nominal voltage (V)	Power frequency	Input power	Max. Current	Max. Flow rate (m³/h)	Max. discharge height (m)	Max. Pressure	Distance Between Flanges (mm)
ECP 32-120F 220(N)	1 x 230 V	50 / 60 Hz	15 .. 329 W	0.17 .. 1.48 A	11	12	PN6/10	220
